General syllabus for Degree of Licentiate in Logic

The syllabus was confirmed by the Faculty Board of Arts at Gothenburg University on 26 October 2017. It is complemented with the following documents, available via the website of the Faculty of Arts (www.hum.gu.se).

Instructions for Third-cycle Studies at the Faculty of Arts.

Here the term ‘doctoral student’ is used for a third-cycle student.

A doctoral student admitted for third-cycle studies for taking the Degree of Doctor in Logic is entitled to request to take the Degree of Licentiate in Logic provided the requirements for courses and essays specified in this syllabus are fulfilled.

Title of qualification and teaching and research duties

The degree obtained is the Degree of Licentiate in Logic. Logic involves stringent and correct reasoning, and is used and studied within all areas of philosophy. However it has also developed into its own specialisation for the study of formal language.

1. Objectives

1.1 General national objectives

According to the Qualifications Ordinance, Appendix 2 of the Higher Education Ordinance, the objectives for the Degree of Licentiate are as follows:

Knowledge and understanding

For the Degree of Licentiate, the doctoral student shall:

– demonstrate knowledge and understanding in the field of research including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular.
**Competence and skills**  
For the Degree of Licentiate, the doctoral student shall:

– demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within pre-determined time frames in order to contribute to the formation of knowledge as well as to evaluate this work,

– demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society at large, and

– demonstrate the ability required to independently participate in research and development work and to independently work in other qualified activities.

**Judgment and approach**  
For the Degree of Licentiate, the doctoral student shall:

– demonstrate the ability to make assessments of ethical aspects of their own research,

– demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and

– demonstrate the ability to identify the personal need for further knowledge and take responsibility for their own ongoing learning.

**1.2 Subject-specific and supplementary objectives**

**Knowledge and understanding**  
For the Degree of Licentiate, the doctoral student shall:

- demonstrate a deepened understanding of the possibilities and limitations of Logic, its role in society and its relationship to other disciplines, in addition to the ability to critically reflect upon their own activities from this perspective

**Competence and skills**  
For the Degree of Licentiate, the doctoral student shall:

– demonstrate written and spoken communicative and pedagogical skills, both within and outside an academic context

– demonstrate the ability to plan and conduct courses at first and second cycle levels within several areas of Logic

– demonstrate the ability to plan, lead and implement research projects

– demonstrate the ability to participate in related areas within the public or private sector
2. Entry requirements
Admission to the programme requires that the applicant fulfils the general and specific entry requirements provided in Chapter 7 of the Higher Education Ordinance.

2.1 General entry requirements
A person meets the general entry requirements under Chapter 7, Section 39 of the Higher Education Ordinance if he or she:
1. has been awarded a second-cycle qualification, or
2. has satisfied the requirements for courses comprising at least 240 higher education credits of which at least 60 higher education credits were awarded in the second-cycle, or
3. has acquired substantially equivalent knowledge in some other way in Sweden or abroad.

2.2 Specific entry requirements
Admission to the third-cycle programme in Logic requires:
1. 30 higher education credits from second-cycle courses in Logic, at least 15 of which must be from a degree project or equivalent knowledge,
2. the type(s) of Swedish and English skills needed to be able to benefit from compulsory parts of the course and to be able to actively participate in seminars and similar activities.

3. Admission and selection
Admission to third-cycle studies in Logic is normally initiated by the Department announcing a call for doctoral studentships. Admission is conditional upon the studies being properly funded.

In selecting between applicants, their ability to benefit from the course or study programme shall be taken into account in accordance with Chapter 7 of the Higher Education Ordinance. To facilitate the selection process, the applicant must submit:
1. Advanced study project within Logic, worth 15 higher education credits, or other project that documents the equivalent knowledge.
2. Bachelor's essays and other advanced study projects at second-cycle level or equivalent.
3. Official transcript or equivalent from first and second-cycle levels, or the equivalent. These are evaluated based on the following criteria: suitable definition of the subject, relevant questioning, suitable command of the subject and structuring of the academic paper, suitable use of language, formalities, academic quality, independence.
4. A project draft of a maximum 3000 words in which the applicant stipulates a research domain that he/she would like to develop, justifies its relevance and discusses which theories, methods and materials would be relevant. The project draft is assessed on the basis of the following criteria:
a) whether the draft displays familiarity with previous and current research within the area,
b) whether the research questions are viable and grounded in current research,
c) whether the draft is judged to be realistic, as regards its implementation at third
-cycle level, and
d) whether the draft shows that it is likely the applicant will make a valuable contribution to research in the area. The project draft also provides supporting information for assessing the Department’s supervisor competence within the research domain stipulated.

5. A letter of recommendation can also be included in the application.

In the overall evaluation, greatest importance is placed on the judgment of whether the applicant will complete the third-cycle studies in the allocated time and with good results.

Admission and selection are also conditional on the Department’s supervisory resources within the doctoral student’s research focus. Admission may also include an interview in addition to a review of qualifications submitted. Admission decisions are made by the Head of Department following preparation at the Department.

4. Programme disposition and content
The third-cycle programme for taking the Degree of Licentiate in Logic comprises 120 higher education credits and leads to a Degree of Licentiate.

The third-cycle programme consists partly of courses, which are examined incrementally, and partly of own research work, which is to lead to a scholarly thesis.

The student shall participate in seminar activities within the confines of her or his education. This includes active discussion and execution of the prescribed public examination tasks. The doctoral student shall also participate in Department-wide activities, unless there are special reasons.

4.1 Courses
The programme consists of a course part comprising 40 higher education credits.

Research-oriented courses, 20 higher education credits. The component constitutes specialised study within one or more areas of Logic (or closely related subjects). The aim is to provide the third-cycle student with the necessary foundations for her or his degree project work. Further content is decided in consultation with the supervisor and is documented in the individual study plan.

Advanced orientation (10 higher education credits). In this component, the third-cycle student deepens or broadens her or his knowledge within Logic (set theory, model theory, recursion theory, proof theory or constructive mathematics) or closely related areas (philosophy, linguistics, mathematics or computer science). The courses are chosen so they best supplement the third-cycle student’s previous studies.

Teaching and Learning in Higher Education and Research Methodology, 10 higher education credits. The component includes:
a) a basic course in higher education pedagogics worth 5 higher education credits, ideally completed during the first year,
b) teaching under supervision,
c) verbal and visual presentation techniques,
d) the art of academic writing,
e) research ethics and responsibilities.

The examination of components or aspects of the course held outside of the Department shall assess whether the accompanying course requirements have been met. Suitable examination methods for additional components are determined by the supervisor or other examiner, for example written tests or assignments, seminar activities, and/or practical didactic exercises. Where a course or part thereof is examined in the form of seminar participation or practical exercises, the examiner is required to ensure that the doctoral student's performance is clearly documented in his/her individual study plan.

If a doctoral student requests credit transfer from previous education, this shall be specified in the individual study plan (see 6.1).

4.2 Licentiate thesis
The thesis comprises 80 higher education credits

The doctoral student is expected to provide regular reports on her or his thesis work. This obligation is primarily fulfilled through presentation at Department seminars.

A licentiate thesis is defended at a public seminar. Both the content and defence are considered in the assessment of the thesis. The thesis is graded with one of the grades Pass or Fail.

For more information, see Instructions for Third-cycle Studies at the Faculty of Arts.

5. Supervision
At least two supervisors shall be appointed for each doctoral student: one principal supervisor and one assistant supervisor. At least one of the supervisors must be employed at the University of Gothenburg, normally at the doctoral student’s home Department. At least one of the supervisors must be qualified for appointment to a readership (Docent) and at least one of the supervisors must have completed supervisor training.

The doctoral student is entitled to supervision at least as stipulated by the standard adopted by the Faculty Board (see Instructions for Third-cycle Studies at the Faculty of Arts).

A doctoral student who so requests is entitled to change supervisors.

6. Individual study plan
An individual study plan, which shall be finalised by no later than two months after commencement of studies, shall be drawn up by the doctoral student and supervisor, in consultation with the doctoral examiner, in connection with admission.

The individual study plan shall be reviewed at least once a year. The review shall clearly identify the doctoral student’s progression.

Doctoral students, supervisors and doctoral examiners shall affirm in writing that they have read the individual study plan and any revisions made.
6.1 Credit transfer
When the individual study plan has been established, the doctoral student may request that credits be transferred from past successfully completed second- or third-cycle education. Credits applied to fulfil the general or specific entry requirements may not also be applied towards the third-cycle degree, but must be replaced with another course. In addition, the following applies:

(i) A doctoral student who has successfully completed a second-cycle course that is included as a compulsory or elective course at third-cycle level may request that the course be replaced with another course of the same extent in the individual study plan. This does not affect the duration of the programme for the Degree of Licentiate.

(ii) A doctoral student who has completed part of her or his third-cycle education while he or she was enrolled as a third-cycle student at another higher education institution or in another subject may request that the part be applied directly to her or his degree without replacements. This reduces the duration of the study programme for a Degree of Licentiate in proportion to the credits transferred.

6.2 Timetable and funding plan
The individual study plan shall include a timetable and associated funding plan for the entire period of study, up to the planned date of taking the Degree of Licentiate.

7. Transitional provisions
Doctoral students admitted before 1 January 2016 may, following consultation with supervisors, request permission from the Head of Department to transfer this programme syllabus. The individual study plan must then be updated.
